

# PBF2C: Push Button Frame 2 With Button Cup

**Wood Pole (-WP) Options Only**

The PBF2C is a frame and cup designed to mount a Polara Bulldog (BDL/BDSP) push button and protect the wires and terminal block. Any of Polara's 5X7 signs can be mounted on the PBF2C, and 9X12, 9X15, and 9X18 signs can be mounted with the addition of a Polara PBFA backplate. The frame can be mounted with 3/4" or smaller banding or with 1/4-20 fasteners, which are included.

Polara's PBF2C can be mounted on any diameter pole as well as on a flat surface.\* The cast aluminum structure and powdercoated finish provides a strong, attractive mount while the deep cup and stem shields the BDL wires and terminal block from the environment.

The cup and frame are made from powdercoated cast aluminum and are available in the standard colors of green, black, and yellow.

**Wood Pole (-WP) Options Only:** For applications requiring conduit, the wood pole option comes with the bottom flat on the cup drilled and tapped with a 1/2" NPT thread capped with a plug. The rear wire boss is also machined down to prevent interference with wood pole mounting.

\*The PBF2C is compatible with the iN-EXT (post 9/19 mfg date) and iNS-EXT family of extenders, as well as the PBFE family of extenders.
