

## iNPA4X2-B: Adapter for mounting two 9"x12" iNavs on a 4" pole

This adapter is designed to offset two iNavigators on a 4.5" OD pole such that two 9"x12" or 9"x15" signs can be mounted without conflict. One adapter is needed behind each iNavigator.

The adapters can either be strapped or bolted to the pole. For bolting, holes are provided to match the 6" spacing of most push button signs or spacing for Pelco 5"x7" frames. The adapter is only compatible with iNavigators and cannot work with PBF2s.

These two adapters accomplish the same outcome of mounting two iNavs as the PBF2S-4.9-B, but with minimal gap between the signs.

The adapter is made of black powder-coated aluminum.

Dimensions are in inches.
